***Allowable Subject Matter***

Claims 1-3 and 5-48 are allowed.

The following is an examiner's statement of reasons for allowance: The present invention is directed to a mobile data collector having mobility that is unpredictable to a wireless sensor network. Each independent claim identifies the uniquely distinct features:

Regarding independent claim 1: "wherein said mobility that is unpredictable to said wireless sensor network comprises a travel schedule of said at least one mobile data collector that is unpredictable to said wireless sensor network".

Regarding independent claim 3: "mobility of said plurality of mobile data collectors resulting in a pattern of accesses of said at least one sensor in said wireless sensor network by ones of said plurality of mobile data collector that is unpredictable to said wireless sensor network".

Regarding independent claim 5: "wherein said mobility that is unpredictable to said wireless sensor network comprises a travel route of said at least one mobile data collector that is unpredictable to said wireless sensor network".

Regarding independent claim 6: "at least one mobile data collector determining if it is range for wireless communication with said at least one sensor; and if determined that said at least one mobile data collector is in range for wireless communication with said at least one sensor, said at least one mobile data collector communicating a wake-up signal to said at least one sensor to cause it to increase its power to level suitable for communication".

Regarding independent claim 13: "using at least one mobile data collector, having mobility that is unpredictable to a wireless sensor network, for performing at least one of data collection from and data communication to at least one sensor in said wireless sensor network; and during a transient communication with said at least one mobile data collector, said at least one sensor communicating data with at least one of (a) timestamp information and (b) spatial location information".

Regarding independent claim 17: "deploying a plurality of mobile collectors that are each operable to communicatively access a node of a wireless sensor network and that are each independently movable; and employing an application that desires communication access with at least one node of the wireless sensor network, wherein said application relies on statistical probability that at least one of the plurality of mobile collectors will travel in communication range of the at least one node of the wireless sensor network for performing the desired communication".

The prior art cited herein fail to anticipate or render the above limitations obvious. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
